Global agricultural exports have more than tripled in value and more than doubled in volume since 1995, driven initially by rising commodity prices between 2000 and 2010. By 2018, exports had surpassed US \$1.8 trillion. In 2024, global merchandise trade volume rose by 2.9%, recovering from a 1.0% decline in 2023, while value growth remained modest at 1.9%, reflecting falling prices, particularly in the energy sector.
